

SOP Calf

Because

Healthy Calves = PROFIT

"Since using **SOP C CALF** in our calf hutches we noticed a great reduction in ammonia. Our calves are much healthier." *Brent & Stephanie Thorne, Kinnear Settlement, NB*

"In our calf barn the air quality has really improved! The calves are breathing better air, and are much healthier." *Benner Holsteins, Steinbach, MB*

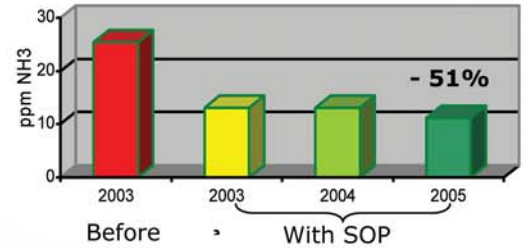

"Since using **SOP C CALF** in our calf barn we have seen a great reduction in flies. We have also reduced our Ecoli scours by about 75%!" *Paul Vis & Sons, Aylmer, ON*

"We have been using **SOP** on our farm now for 3 years. We are really impressed with the great job **SOP** is doing to maintain things. There used to be a strong ammonia odour in the calf pens, and bedding packs, and here hasn't been any odour now since **SOP**. Our overall health of the animals is great, we used to get a few heifers that would be coughing in the fall, and the last couple years, we haven't heard any. Flies, it is amazing, we really noticed this more in the second year of using **SOP** in all the barns, that the flies are really gone! We have been working with a Lely Robot milking system now for 6 years, and as I said **SOP** for 3 years. I really feel that this combination has helped our milking herd health. Our vet costs are down to less than one cent per litre of milk which includes herd health and hoof trimming costs! We use very little shavings in our freestalls, and we have even noticed a lot less swollen hocks. Our lagoon takes about 1/3 of the normal time to agitate and it is working the way it should now. We have made using **SOP** part of our weekly routine, which is very easy considering the positive success we get from using it, and we want to keep it up!" *Dirk Willemsen, Milverton, ON*

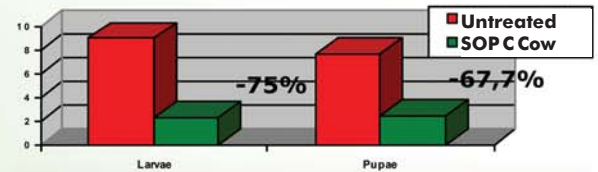

Less AMMONIA

Ammonia concentration on customer's farm

Less FLIES

SOP C COW Reduction in flies (larvae + pupae) on customer's farm 2007

Drier BEDDING

With **SOP C Calf**, the bedding is dry and compact which means healthier calves!
