

# SOP C COW

## SOP C COW

*For treatment of bedding packs, stalls and manure of dairy cows. Read what breeders have to say...*

Dirk Willemsen - Milverton, ON

We have been using SOP on our farm now for 3 years. We are really impressed with the great job SOP is doing to maintain things. There used to be a strong ammonia odour in the calf pens, and bedding packs, and here hasn't been any odour now since SOP. Our overall health of the animals is great, we used to get a few heifers that would be coughing in the fall, and the last couple years, we haven't heard any. Flies.. it is amazing, we really noticed this more in the second year of using SOP in all the barns, that the flies are really gone! We have been working with a Lely Robot milking system now for 6 years, and as I said SOP for 3 years. I really feel that this combination has helped our milking herd health. Our vet costs are down to less than one cent per litre of milk which includes herd health and hoof trimming costs! We use very little shavings in our freestalls, and we have even noticed a lot less swollen hocks. Our lagoon takes about 1/3 of the normal time to agitate and it is working the way it should now. We have made using SOP part of our weekly routine, which is very easy considering the positive success we get from using it, and we want to keep it up!

Greg Harbers - Monarch, AB

Since using SOP C COW, we have seen an incredible difference in our packs since using SOP. Normally we used to clean our pack out every 3-4 months. We have now gone 14 months without cleaning them out! We haven't reduced the amount of straw used because we have a few more extra cows on the pack than normal, but the packs are staying much firmer, drier, and healthier now. Our SCC before SOP was running around 180-200,000. And now we are able to maintain around 120,000! For us SOP has been a great investment!

Brent & Stephanie Thorne - Kinnear Settlement, NB

Since we started using SOP C COW in our dairy barn last April '07 we have seen a great improvement in the air quality in our barn! The ammonia odour is no longer present. We have a solid manure system, and when we spread our manure last fall there was very little smell. Before using SOP our SCC was usually around 150,000, and it has gradually kept reducing to now where we are at 100,000! We are using the SOP C CALF in our calf hutches' and we have seen a big difference with the ammonia odour in them. The hutches' area staying drier and the calves are much healthier. We are very happy with the investment we have made in SOP products, to have healthier environments for our animals, and also for us!

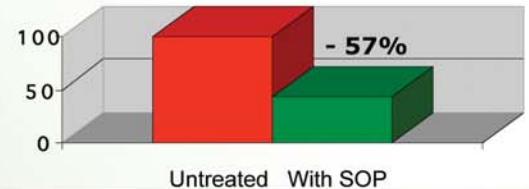

## Improved HYGIENE

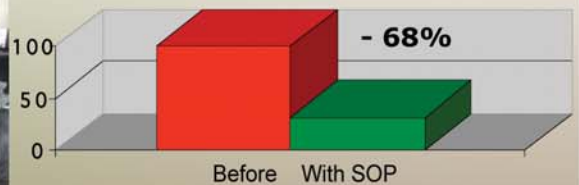

## Reduced FOOT DERMITITIS

% Reduction in cases of dermatitis (average of 10 farms)

## Reduced CLINICAL MASTITIS

% Reduction in cases of mastitis (average of 10 farms)

*Another added benefit is IMPROVED BEDDING!*
