SOP LAGOON

For use in liquid manure in lagoons, receiving pits and under slats.
Read what breeders have to say...

Ferme Rodovanel - Robert Rossier - Chesterville, QC

We started to use SOP LAGOON at our farm in September '07. Before, using SOP we would have a lot of crust on the top of the pit in the spring. We were even having a hard time to put the pump in the pit to mix it. This year we were very impressed to see that it has entered real easily into the pit. Even more, to see that we were ready to load after only 2 hours of agitation, compared to 5 hours normally. My father-in-law was there to help us and was saying that there was very little odour. We are really happy with the results of SOP products.

Tony Vogel - Williamstown, ON

We started using SOP LAGOON in May '07. When we agitated our manure pit this fall, we saw that the manure agitated much better. While spreading we noticed very little odour, which is very important to us, as we live quite close to town.

Sunspark Holsteins - Hepworth, ON

We started using SOP LAGOON in our manure pit in May '07. After using SOP LAGOON for 6 months we saw a great change in agitation time. We reduced our agitation time by at least 40%! The manure was more consistent while hauling out to the fields. SOP LAGOON has been a great investment for us to save on fuel, labour, and the wear on our equipment.

Cooon Flora Farms - Henk Schuurmans - Elmira, ON

We started using SOP LAGOON in our manure pit in June '07. Since using SOP LAGOON we have seen a big difference in agitation time! We have also noticed less flies in the barn and in our manure storage area.

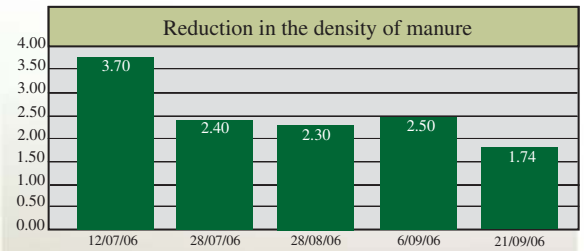

Londedge Holsteins - Ilderton, ON

We also started using SOP LAGOON in September '07 for our liquid manure system. We have a separation pit before our lagoon to try to separate the sand before going to the lagoon. Since using SOP LAGOON we can see that the sand is separating better from the manure and staying at the bottom of the separation pit. When we clean this pit out, it is much easier. SOP products have been a great investment for us so far, to help keep our heifers breathing better air, and also having our manure system easier to work with, saving us time and money.

Overall BENEFITS

BENEFITS

- Eliminates crust and manure sediments
- Reduces agitation and pumping time
- Reduces ammonia gas
- Significantly reduces odours when spreading = happy neighbours
- Improves decomposition of manure
- Reduces nitrates
